## ES106

### Outdoor Environment Air Quality Inspection System

ES106 is an intergraded device and designed for all types of environmental monitoring. It can be used to detect multiple parameters of temperature, humidity, PM2.5, PM10, wind speed and wind direction in the environment. Each parameter is independent and high sensitivity, users can freely integrate monitoring parameters. ES106 has the characteristics of high precision and good stability, which is suitable for various environmental monitoring.

The ES106 is equipped with a standard RS485 interface and supports the Modbus RTU protocol, which can be integrated into the Internet of Things and cloud interfaces, such as smart city boxes and NB-IoT routers WR222 or LoRa node LC144, for real-time monitoring and analysis via remote smartphones or computers.
